¹ Application redirection: hosting Windows applications in 3D

Maarten van Dantzich, Vadim Gorokhovskiy, George Robertson

Proceedings of the 1999 workshop on new paradigms in information visualization and manipulation in conjunction with the eighth ACM international conference on Information and knowledge management

Publisher: ACM Press

Full text available:  pdf(1.15 MB).

Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#), [index terms](#)

We present Application Redirection, a novel architecture that lets unmodified Windows applications be hosted in a 3D virtual environment. The result is a platform for experimentation in 3D Information Visualization in which the user retains all familiar productivity tools. This paper describes the implementation of Application Redirection, using the Task Gallery to illustrate how it is used.

Keywords: 3D user interfaces, 3D window managers, information visualization, window managers

2 Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research**

Publisher: IBM Press

Full text available:  pdf(4.21 MB).

[Additional Information: full citation, abstract, references, index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

3 Mobile file system support with virtual device drivers

Dorota M. Huizinga, Christine Ames
